

CHIGWELL SCHOOL NETCOM CLEVERTOUCH SOLUTION

Netcom92 Clevertouch solutions Chigwell School case study

The requirement:

In June Chigwell School received a call from our internal sales team. Where they found out that Chigwell School was looking for a touchscreen. The enquiry was then logged for the internal sales team to put a quote together with all the customer's needs.

Chigwell wanted to put a touchscreen onto a trolley so they could use it in multiple rooms. Clevertouch was one of their proffered solutions.

To accommodate the schools need of being able to move the screen from classroom to classroom we decided that a height adjustable trolley would be best, and safe for all the pupils working in there.

Chigwell School was looking for a company who could take care of the entire project including product supply, installation and design.

The full requirements were:

- 1 x 55" Clevertouch Screen
- 1 x Clevertouch fixed height trolley

Clevertouch Screen:

Chigwell School required a new touchscreen for their ICT suites. The movability was very important as the school needed to take the screen from each room when needed.

Netcom understand that the students need easy access to the screen. With this in mind we mounted the Clevertouch to a fixed height trolley.

Netcom provided the school with a 55" Clevertouch screen and a Clevertouch fixed height trolley.

Netcom installed the screen to the trolley and then delivered to site.
